FORECAST FOR THE NEXT FORTNIGHT

BORERS

This pest flourish best at optimum temperature 35-41C° with relative humidity below 65-70%. The current weather conditions on overall South Punjab basis is as; maximum temperature **19.0** C°**, minimum 5.9** C° **with R. humidity 71.9%**. It is predicted that the population of this pest will sustain during the next fortnight.

PYRILLA

This pest flourish best at optimum temperature 29-40 C° with relative humidity 75-84 . The current weather conditions on overall South Punjab basis is as; maximum temperature **19.0** C°**, minimum 5.9** C° **with R. humidity 71.9%**. It is predicted that the population of this pest will sustain during the next fortnight.

WHITEFLY

This pest flourish best at optimum temperature 29-40 C° with relative humidity 75-84 The current weather conditions on overall South Punjab basis is as; maximum temperature **19.0** C°**, minimum 5.9** C° **with R. humidity 71.9%**. It is predicted that the population of this pest will sustain during the next fortnight.

BLACK BUG

This pest flourish best at optimum temperature 22.9-40.9 C° with relative R. humidity 46%. The current weather conditions on overall South Punjab basis is as; maximum temperature **19.0** C°**, minimum 5.9** C° **with R. humidity 71.9%**. It is predicted that the population of this pest will sustain during the next fortnight.

TOKA

The optimal temperature and RH conditions for the feeding activities are 28.5-33 C° and 60-70 C° % respectively. The current weather conditions on overall South Punjab basis is as; maximum

temperature **19.0** C°**, minimum 5.9** C° **with R. humidity 71.9%**. It is predicted that the population of this pest will sustain during the next fortnight.

MEALY BUG

This pest flourish best at optimum temperature 29-40 C° with relative humidity 75-84%. The current weather conditions on overall South Punjab basis is as; maximum temperature **19.0** C°**, minimum 5.9** C° **with R. humidity 71.9%**. It is predicted that the population of this pest will sustain during the next fortnight.

TERMITES

The optimal temperature and RH conditions for the feeding activities are 35°-40 C° and 70-80% respectively . The current weather conditions on overall South Punjab basis is as; maximum temperature **19.0** C°**, minimum 5.9** C° **with R. humidity 71.9%**. It is predicted that the population of this pest will sustain during the next fortnight.

MITES

The optimal temperature and RH conditions for the feeding activities are 30°-36 C° and 20-40% respectively. The current weather conditions on overall South Punjab basis is as; maximum temperature **19.0** C°**, minimum 5.9** C° **with R. humidity 71.9%**. It is predicted that the population of this pest will sustain during the next fortnight.

RUST

This disease flourish best at optimum temperature 12-14 C° with relative humidity below 80-85%. The current weather conditions on overall South Punjab basis is as; maximum temperature **19.0** C°**, minimum 5.9** C° **with R. humidity 71.9%**. It is predicted that the population of this pest will sustain during the next fortnight.

RED ROT

This disease flourish best at optimum temperature 25.5-26.5 C° with relative humidity 60. The current weather conditions on overall South Punjab basis is as; maximum temperature **19.0** C°**,**

minimum 5.9 C° **with R. humidity 71.9%**. It is predicted that the population of this pest will increase during the next fortnight.

WHIP SMUT

This disease flourish best at optimum temperature 14-35 C° with relative humidity 55-80%. The current weather conditions on overall South Punjab basis is as; maximum temperature **19.0** C°**, minimum 5.9** C° **with R. humidity 71.9%**. It is predicted that the population of this pest will increase during the next fortnight.

MOSAIC VIRUS

The current weather conditions on overall South Punjab basis is as; maximum temperature **19.0** C°**, minimum 5.9** C° **with R. humidity 71.9%**. It is predicted that the population of this pest will sustain during the next fortnight.

RECOMMENDATIONS

BORERS MANAGEMENT

- Install cards of beneficial insects (*Trichograma*) from the start of crop.
- Apply granular insecticide carbofuron 3G@ 12-14 kg/acre to the fields where infestation of sugarcane borers observed above ETL.

PYRILLA MANAGEMENT

- Promote parasitic insects (*Tetrastichus pyrillae*) against eggs of pyrilla and (*Epiricania melanoleuca)* against nymphs and adults of pyrilla.
- Cut the leaves 6 inch in length from those fields having parasite eggs and pupae in abundance and shift/hang them in fields where parasites are not found.
- Apply Granular insecticide Carbofuron 3G@ 12-14 kg/acre to the fields where infestation of sugarcane Pyrilla reaches ETL and parasites are not found. Application of granules may be done till the 6 feet height of canes.

WHITEFLY MANAGEMENT

- Cut severe infested leaves of whitefly and bury in the soil.
- Install cards of beneficial insects i.e *Chrysoperla carnea*

BLACK BUG MANAGEMENT

- Avoid the cane fields from water stress.
- Apply granular insecticide carbofuron 3G@ 12-14 kg/acre

RUST MANAGEMENT

- Cultivate resistant varieties.
- Cut and burn the diseased plants/ Plant pests.

WHIP SMUT MANAGEMENT

- Cut and burn the diseased plants / Plant pests

ECONOMIC THRESHOLD LEVELS (ETLs) OF SUGARCANE PESTS

INSECT PESTS	ECONOMIC THRESHOLD LEVEL
Borers	10% infested canes.
Pyrilla	3 per leaf.
Whitefly	10 per Leaf
Black bug	10 per sheath.
Toka	3 per sweep
Mites	10 per Leaf
Mealy bug	Only presence
Termites	10% damage
Rodents	5 live burrows per acre
Diseases	Only presence
