# PEST SITUATION ON RICE CROP IN PUNJAB DURING 1<sup>ST</sup> WEEK OF SEPTEMBER, 2019

RICE BORERS: On overall Punjab basis 0.32% spots above ETL of Rice Borers

have been observed as compared to 0.08% spots during the same corresponding period of last year, whereas 6.26% spots below ETL have been observed as compared to 5.92% spots during the same corresponding period of last year. It is predicted that its infestation may increase during next week.

### District wise percentage of hot spots of Rice Borer

| Sr. | TEHSIL       | %AGE |
|-----|--------------|------|
| 1   | BAHAWALNAGER | 12.5 |
| 2   | SAHIWAL      | 2.86 |
| 3   | OKARA        | 2.86 |

RICE LEAF FOLDER: On overall Punjab basis 0.00% spots above ETL of Rice Leaf

folder have been observed as compared to 0.23% spots during the same corresponding period of last year, whereas 8.44% spots below ETL have been observed as compared to 10.02% spots during the same corresponding period of last year. It is predicted that its infestation may increase during next week.

WHITE-BACKED PLANT HOPPER: On overall Punjab basis 0.00% spots above

ETL of White-back Plant hopper have been observed as compared to 0.00% spots during the same corresponding period of last year, whereas 0.45% spots below ETL have been observed as compared to 0.32% spots during the same corresponding period of last year. It is predicted that its infestation may increase during next week.

TOKA: On overall Punjab basis 0.00% spots above ETL of Toka have been

observed as compared to 0.4% spots during the same corresponding period of last year, whereas 10.23% spots below ETL have been observed as compared to 14.42% spots during the same corresponding period of last year. It is predicted that its infestation may increase during next week.

FOOT ROT: On overall Punjab basis symptoms of Foot rot have been recorded,

4.28% spots during the week under report as compared to 3.28% spots during the same corresponding period of last year. It is predicted that its infestation may increase during next week.

## District wise percentage of hot spots of Foot rot

| Sr. | TEHSIL         | %AGE | Sr. | TEHSIL     | %AGE |
|-----|----------------|------|-----|------------|------|
| 1   | HAFIZABAD      | 15.1 | 7   | GUJRANWALA | 5    |
| 2   | SHEIKHUPURA    | 9.1  | 8   | FAISALABAD | 4    |
| 3   | T.T. SINGH     | 9.1  | 9   | NAROWAL    | 3.8  |
| 4   | M.B.DIN        | 8.5  | 10  | PAKPATTAN  | 3.6  |
| 5   | SIALKOT        | 6.3  | 11  | SARGODHA   | 1.8  |
| 6   | NANKANA SAHIB. | 6.3  |     |            |      |

#### **BACTERIAL LEAF BLIGHT:** On overall Punjab basis symptoms of Bacterial Blight

have been recorded on 0.70% spots during the week under report as compared to 0.24% during the same corresponding period of last year. It is predicted that its infestation may increase during next week.

#### District wise percentage of hot spots of Bacterial leaf blight

| Sr. | TEHSIL       | %AGE |
|-----|--------------|------|
| 1   | BAHAWALNAGER | 16.7 |
| 2   | VEHARI       | 8.3  |
| 3   | CHINIOT      | 3.9  |
| 4   | SAHIWAL      | 2.9  |
| 5   | FAISALABAD   | 2.6  |
| 6   | SARGODHA     | 1.8  |

## **BROWN LEAF SPOTS:** On overall Punjab basis symptoms of Brown Leaf Spot (BLS)

have been recorded on 1.09% spots during the week under report as compared to 2.32% during the same corresponding period of last year. It is predicted that its infestation may increase during next week.

## District wise percentage of hot spots of Brown Leaf Spots

| Sr. | TEHSIL     | %AGE |
|-----|------------|------|
| 1   | HAFIZABAD  | 8.2  |
| 2   | T.T. SINGH | 4.5  |
| 3   | M.B.DIN    | 4.2  |
| 4   | SARGODHA   | 3.6  |
| 5   | NAROWAL    | 1.5  |
| 6   | GUJRANWALA | 1.2  |

## SHEATH BLIGHT: On overall Punjab basis symptoms of Sheath Blight have been

recorded on 0.00 % spots during the week under report as compared to 0.16% during the same corresponding period of last year. It is predicted that its infestation may increase during next week.

BLAST: On overall Punjab basis symptoms of Rice Blast have been recorded on

0.51% spots during the week under report as compared to 0.24% during the same corresponding period of last year. It is predicted that its infestation may increase during next week.

## District wise percentage of hot spots of Rice Blast

| Sr. | TEHSIL       | %AGE |
|-----|--------------|------|
| 1   | BAHAWALNAGER | 20.8 |
| 2   | LAHORE       | 1.3  |
| 3   | SHEIKHUPURA  | 0.9  |
| 4   | GUJRANWALA   | 0.6  |

## Meteorological data of the current week 2019-2020

#### **Summary of weather forecast**

Overall weather for seven days in rice zone during next week will remain less hot than previous week, cloudy and more chances of precipitation with an average 3-4°C decrease in temperature.

#### **Forecast of Rice Pests:**

**Borer:** This pest flourishes best in warm humid climate with optimum temperature 17-30 °C with relative humidity between 45-80%. The current weather conditions on overall Punjab basis (temp. Max. 38.6 °C, Min. 27.6 °C with R. humidity 35.3%) & forecast for the next week temp. Max. 38.6 °C, Min. 27.6 °C with humidity 35.3%. Keeping in view the temperature for current week and weather forecast of next

week, it is predicted that population of this pest may increase during the coming week as the temperature remain favorable for the development of this pest.

**Leaf Folder:** This pest flourishes best in warm humid climate with optimum temperature 25-30°C. The current weather conditions on overall Punjab basis (temp. Max. 38.6 °C, Min. 27.6 °C with R. humidity 35.3%) & forecast for the next week temp. Max. 38.6°C, Min. 27.6°C with humidity 35.3%. Keeping in view the temperature for current week and weather forecast of next week, it is predicted that population of this pest may increase during the coming week as the temperature remain favorable for the development of this pest.

**White-backed plant hopper:** This pest flourishes best in warm humid climate with optimum temperature 25-29°C with relative humidity between 80-90%. The current weather conditions on overall Punjab basis (temp. Max. 38.6 °C, Min. 27.6 °C with R. humidity 35.3%) & forecast for the next week temp. Max. 38.6°C, Min. 27.6°C with humidity 35.3%. Keeping in view the temperature for current week and weather forecast of next week, it is predicted that population of this pest may increase during the coming week as the temperature remain favorable for the development of this pest.

**Brown plant hopper:** This pest flourishes best in warm humid climate with optimum temperature 28-30°C with relative humidity below 80-90%. The current weather conditions on overall Punjab basis (temp. Max. 38.6°C, Min. 27.6°C with R. humidity 35.3%) & forecast for the next week temp. Max. 38.6°C, Min. 27.6°C with humidity 35.3%. Keeping in view the temperature for current week and weather forecast of next week, it is predicted that population of this pest may increase during the coming week as the temperature remain favorable for the development of this pest.

**Toka:** This pest flourishes best in warm humid climate with optimum temperature 24-40°C with relative humidity between 30-80%. The current weather conditions on overall Punjab basis (temp. Max. 38.6 °C, Min. 27.6 °C with R. humidity 35.3%) & forecast for the next week temp. Max. 38.6 °C, Min. 27.6 °C with humidity 35.3%. Keeping in view the temperature for current week and weather forecast of next week, it is predicted that population of this pest may increase during the coming week as the temperature remain favorable for the development of this pest.

**Foot rot:** High humidity and cloudy weather during heading stage are favorable for the development of foot rot of rice. The fungus have a wide range of temperature for optimum growth which is between 30-35 °C. The current weather conditions on overall Punjab basis (temp. Max. 38.6 °C, Min. 27.6 °C with R. humidity 35.3%) & forecast for the next week temp. Max. 38.6 °C, Min. 27.6 °C with humidity 35.3%. Keeping in view the temperature for current week and weather forecast of next week, it is predicted that population of this pest may increase during the coming week as the temperature remain favorable for the development of this disease.

**Bacterial Leaf Blight**: Heavy rain, heavy dew, flooding, deep irrigation water are favorable factors for the development of disease. Temperature for optimum growth is between 25-34 °C with relative humidity above 70%. The current weather conditions on overall Punjab basis (temp. Max. 38.6 °C, Min. 27.6 °C with R. humidity 35.3%) & forecast for the next week temp. Max. 38.6°C, Min. 27.6°C with humidity 35.3%. Keeping in view the temperature for current week and weather forecast of next week, it is predicted that population of this pest may increase during the coming week as the temperature remain favorable for the development of this disease.

**Brown Leaf spots:** Non-flooded and nutrient deficient soils or soils with accumulation of toxic substances are favorable for the development of disease. Temperature for optimum growth is between 16-36 °C with relative humidity from 86-100%. The current weather conditions on overall Punjab basis (temp. Max. 38.6 °C, Min. 27.6 °C with R. humidity 35.3%) & forecast for the next week temp. Max. 38.6 °C, Min. 27.6 °C with humidity 35.3%. Keeping in view the temperature for current week and weather forecast of next week, it is predicted that population of this pest may increase during the coming week as the temperature remain favorable for the development of this disease.

**Sheath Blight**: Crop plants during rainy season are more vulnerable to the disease. Temperature for optimum growth is between 28-32 °C with relative humidity from 85-100%. The current weather conditions on overall Punjab basis (temp. Max. 38.6 °C, Min. 27.6 °C with R. humidity 35.3%) & forecast for the next week temp. Max. 38.6 °C, Min. 27.6 °C with humidity 35.3%. Keeping in view the temperature for current week and weather forecast of next week, it is predicted that population of

this pest may increase during the coming week as the temperature remain favorable for the development of this disease.

**Blast:** Intermittent drizzles, cloudy weather, more of rainy days, Low night temperature and longer duration of dew are favorable factors for the development of disease. Temperature for optimum growth is between 25-30 °C with relative humidity between 93-99%. The current weather conditions on overall Punjab basis (temp. Max. 38.6 °C, Min. 27.6 °C with R. humidity 35.3%) & forecast for the next week temp. Max. 38.6 °C, Min. 27.6 °C with humidity 35.3%. Keeping in view the temperature for current week and weather forecast of next week, it is predicted that population of this pest may increase during the coming week as the temperature remain favorable for the development of this disease.

#### RECOMMENDATION

#### **RICE BORER MANAGEMENT**

- Use resistant varieties.
- Discard the infested plants while transplanting.
- Ensure proper timing of planting and synchronous planting, harvest crops at ground level to remove the larvae in stubble, remove stubble and volunteer rice, plow and flood the field.
- At seedbed and transplanting, handpick and destroy egg masses.
- Raise level of irrigation water periodically to submerge the eggs deposited on the lower parts of the plant.
- Clip off the tips of the seedlings at the time of transplanting because the eggs
  of yellow and white stem borers are laid near the tip of the leaf blade. It will
  reduce a considerable number of egg masses and young larvae of the stem
  borers.
- Install light traps up to September to monitor moth population of stem borers.
- Use balanced Fertilizers (NPK) within 45 days after transplanting of nursery.
- Complete application of urea up to 31st August because due to late application of Urea, the plant becomes succulent and dark-green which attracts the insects, especially stem borers and leaf roller and helps in their rapid multiplication.

#### **BROWN LEAF SPOT MANAGEMENT**

- Use resistant varieties.
- Contact your local agriculture office for an up-to-date list of available varieties.
- Follow rice with a different crop, or fallow period.
- Avoid ratooning.
- Flood and plow field after harvesting if possible.
- Remove grassy weeds from fields and borders.
- Reduce density of planting.

#### **FOOT ROT SPOT MANAGEMENT**

- Avoid sowing of seed obtained from infected crop.
- Uproot the diseased plants and destroy them.
- Use Potash 1 Bag within 14 days.
